## Teaching Experience

Chemistry 51A,B,C, & LC: *Introduction to Organic Chemistry* (2001, 2005-present) – The sophomore organic chemistry series emphasizes mechanistic organic chemistry as a tool both to manipulate and understand our surroundings.

Chemistry 128: *Introduction to Chemical Biology* (2003-2018) – Using the tools of arrow pushing and mechanistic organic chemistry, this upper division course surveys the chemical basis for life, ranging from the Central Paradigm of Molecular Biology to viruses. The course introduces students to cutting-edge concepts in chemical biology, and concludes with an assignment to devise an original research proposal.

Chemistry 128L: *Chemical Biology Laboratory* (2002-2003) – Devised when no examples of chemical biology lab courses were offered, this course was designed to introduce upper-division undergraduates to key laboratory skills in chemical biology. The experiments, adapted for undergraduate pedagogy, emphasize discovery, and draw from a wide variety of techniques in chemical biology – including combinatorial synthesis, phage display, and toxicity assays.

Chemistry 219: *Graduate Chemical Biology* (2002-2003, 2016, 2018) – This course, which was

initiated and developed by GAW, surveys current topics at the forefront of chemical biology, including mechanistic enzymology, post-translational modification reactions, protein engineering and chemical genetics. The course concludes with an assignment to write a research proposal.

Chemistry 220: *Graduate Bioorganic Chemistry* (2000-2003) – This course examines the mechanism of action for a broad range of cytotoxic agents.
